ROLLEIFILM presents the successor of KODAK™ TECHNICAL PAN

Hamburg, October 2007 - The B&W specialist MACO PHOTO PRODUCTS, Hamburg-Stapelfeld/Germany, presents ROLLEI ATP 1.1 film.

ROLLEI ATP 1.1 is a NEW film which differs from the proven GIGABIT and SPUR products, and provides a genuine successor to KODAK™ TECHNICAL PAN.

The needs of scientific photography have previously been served by KODAK TECHNICAL PAN film. Now, the gap resulting from the discontinuance of this product will be closed with the impressive quality of ROLLEI ATP 1.1.

In a jointly-initiated field test of ROLLEIFILM and the APHOG-forum, over 60 testers produced impressive practical results.

A specialist of the German photo industry, Dipl. Ing. Heribert Schain of the SPUR company says about this new film:

"After first tests, we can communicate, that the film can be regarded as an genuine successor of KODAK™ TECHNICAL PAN film. With kind regards, Heribert Schain".

© Jan Lohrenz, ROLLEI ATP, Entwickler: ROLLEI RLC

ROLLEI ATP 1.1 is an extremely high-resolution, fine-grain B&W film. It has a nominal sensitivity of ISO 32. The film is characterised by extremely fine grain, very high sharpness, and contrast variability. By selecting an appropriate developer, ROLLEI ATP 1.1 can be used for applications including: pictorial photography, document film photography, reproductions, letters or title slides, photomicrography, astro photography, solar photography, and with employment of "photographic electrophoretic gels" can be used for laser recordings.

ROLLEIFILM recommends the high quality developer ROLLEI LOW CONTRAST (RLC) up to 16 ISO, and with the new ROLLEI ATP developer up to 40 ISO.

The film is offered as 135-36 cartridges and as 35mm bulk film 30.5 meters. ROLLEI ATP developer will be available in 20ml and 140ml bottles (sufficient for 1 or 7 films).

Film and developers are available immediately.
